Subject: Job Application for Investment Banking Summer Analyst - Infrastructure MA Advisory - Summer 2027

Dear Agentis Capital Advisors Hiring Team,

I am writing to express my enthusiastic application for the Investment Banking Summer Analyst position within your Infrastructure MA Advisory team. As a final-year Mathematics and Finance student at the University of Waterloo with specialized training in advanced computational modeling, I am drawn to Agentis Capital Advisors reputation for delivering unparalleled value across complex infrastructure transactions.

Throughout my academic career and independent study, I have cultivated a disciplined work ethic that prioritizes analytical rigor and adaptability. My experience managing operational aspects of large-scale events, where I negotiated bookings and managed client relationships for audiences exceeding 800 attendees, has honed my ability to thrive in fast-paced, high-stakes environments. This background translates directly to the meritocratic culture you describe, allowing me to quickly absorb new responsibilities and contribute meaningfully to a close-knit team without needing extensive hand-holding.

Technically, I possess the modeling capabilities required to execute complex financial analyses for infrastructure deals. For instance, in a recent project, I engineered an autonomous pipeline that managed concurrent operations across multiple platforms using Python asyncio and advanced data validation structures, effectively eliminating manual management time entirely. This experience mirrors your requirement to utilize macros and VBA programming for asset valuations, as I have consistently built scalable backend orchestration layers that parse unstructured data instantly. I am eager to bring this same engineering mindset to developing robust financial models for equity and debt offerings on active projects.

Sincerely,

Abishan Arulselvan
